Note: This table includes companies with a previous post-money valuation of over €10 million, ranked by valuation step-up (post to pre), in Q2 2026.

Median VC deal value (€M) by series

Source: PitchBook • Geography: Europe • As of 30 June 2026

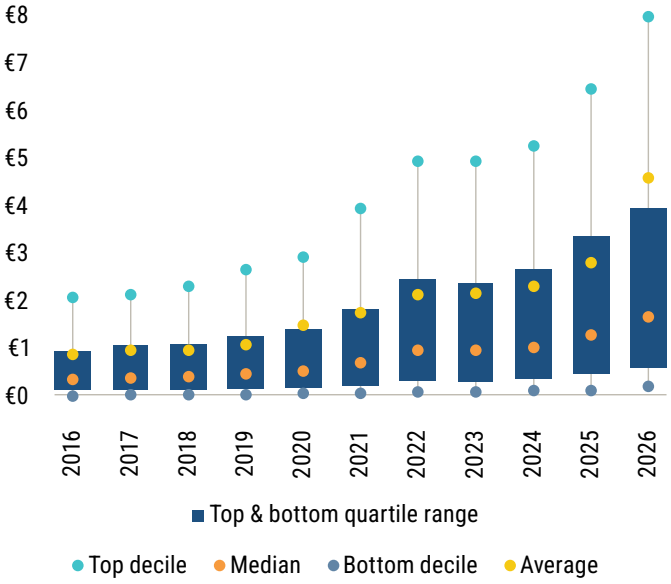

Median VC pre-money valuation (€M) by series

Source: PitchBook • Geography: Europe • As of 30 June 2026

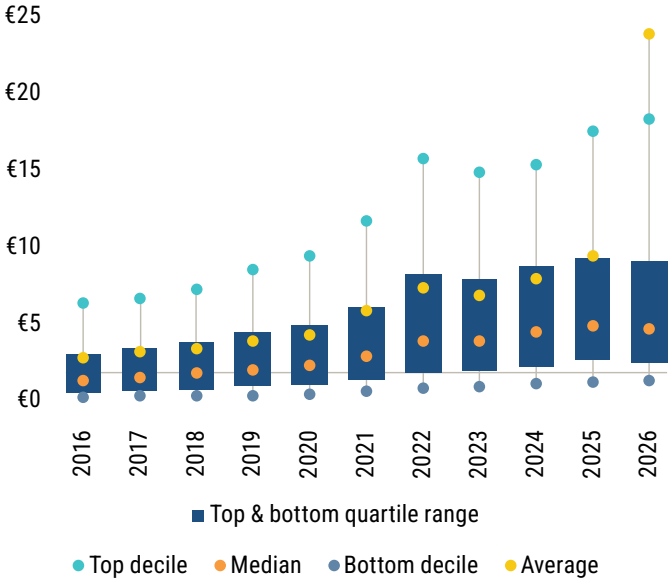

As of H1, valuation step-ups at the beginning of the VC funnel stepped down. Pre-seed/seed median valuations sat at €4.8 million, 4.7% lower than 2025 and a decline compared with Q1 2026 levels. This was the only stage to see a decline; median deal sizes saw a step-up, now at €1.7 million from €1.3 million in 2025.

Pre-seed/seed deal value (€M) dispersion

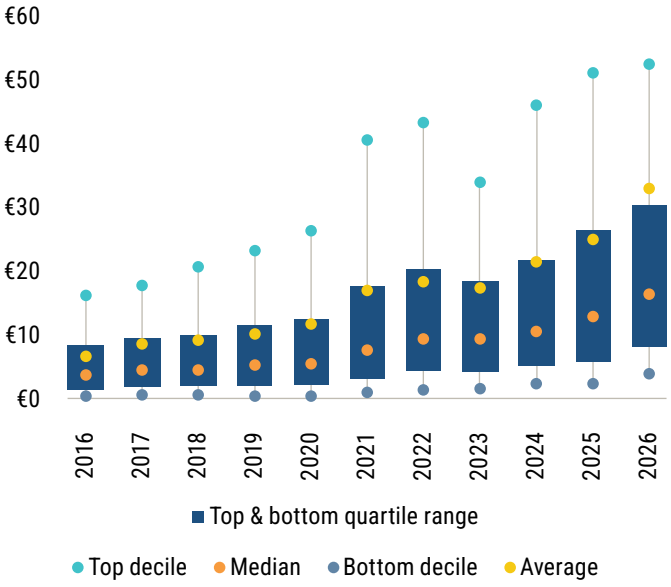

Source: PitchBook • Geography: Europe • 30 June 2026

Pre-seed/seed pre-money valuation (€M) dispersion

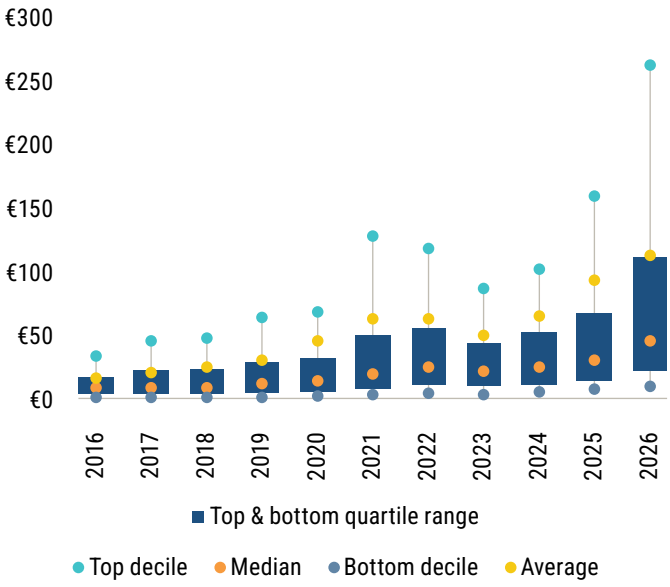

Source: PitchBook • Geography: Europe • 30 June 2026

Series A-B deal value (€M) dispersion

Source: PitchBook • Geography: Europe • 30 June 2026

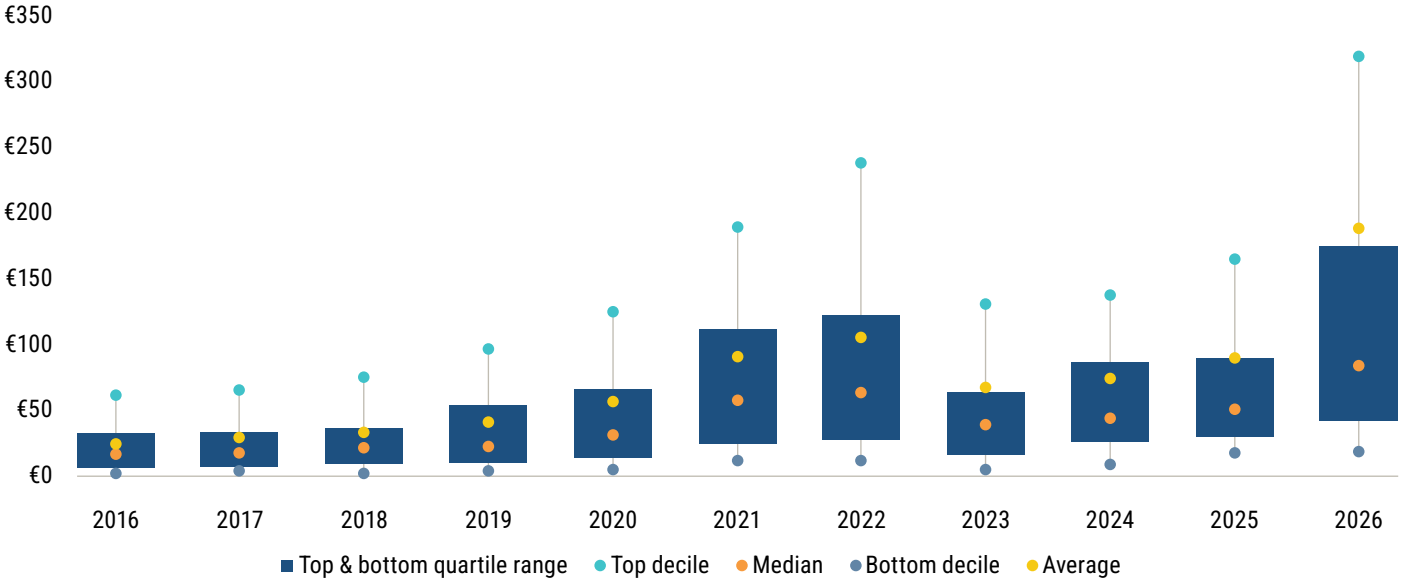

Series A-B pre-money valuation (€M) dispersion

Source: PitchBook • Geography: Europe • 30 June 2026

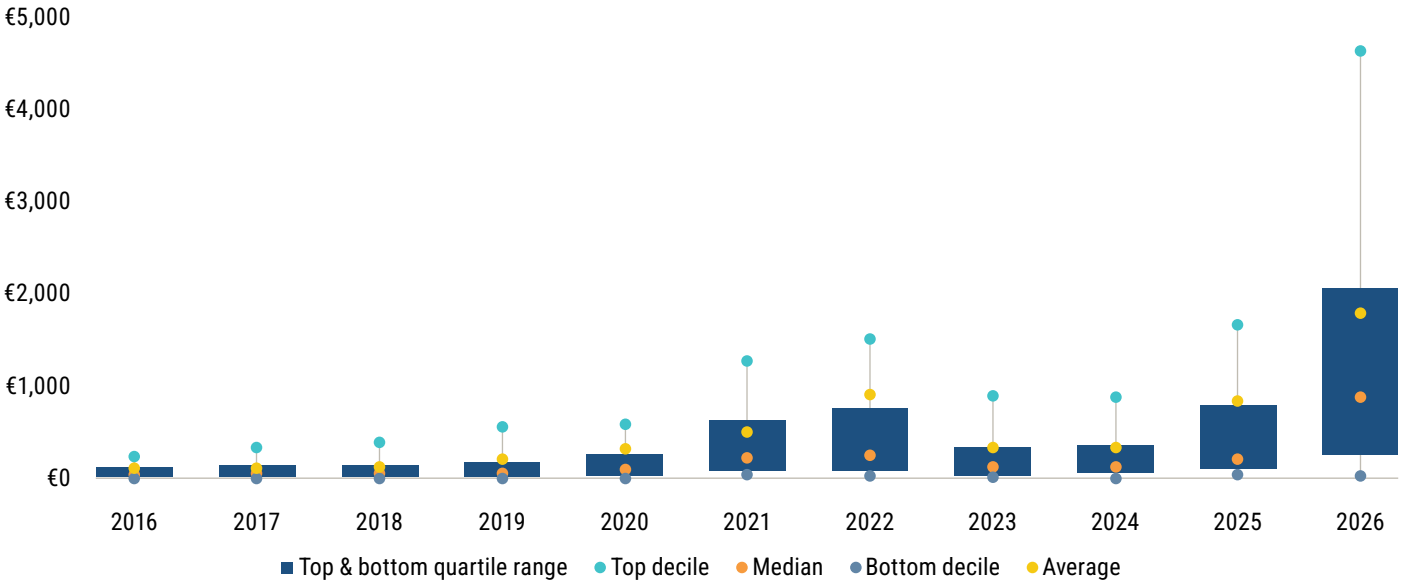

Within Series A-B rounds, the median deal size and valuation increased to €17.1 million and €47.8 million, respectively, with valuations increasing more since the start of the year than deal size. Comparing H1 2026 to 2025, median valuations now sit 26.3% and 45.5% higher than 2025 levels, respectively, as a range of companies across AI, cleantech, and advanced manufacturing—such as Fractile, Focused Energy, and QuantWare—have raised large rounds in the series so far this year.

Series C-D deal value (€M) dispersion

Source: PitchBook • Geography: Europe • 30 June 2026

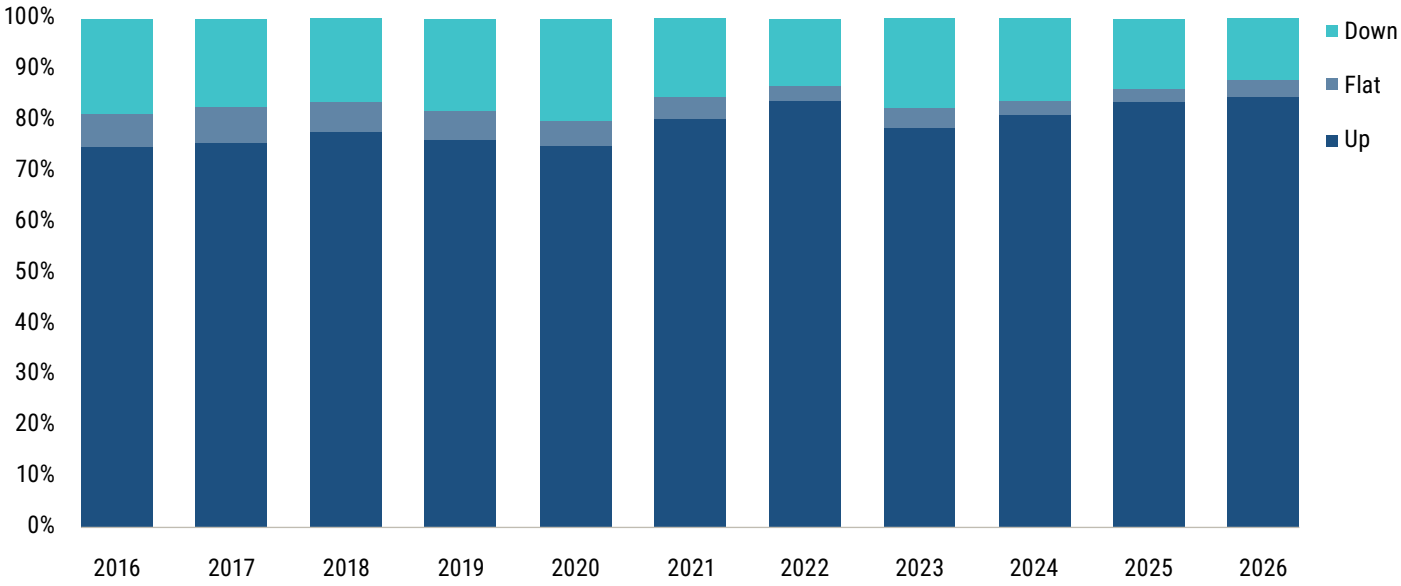

Series C-D pre-money valuation (€M) dispersion

Source: PitchBook • Geography: Europe • 30 June 2026

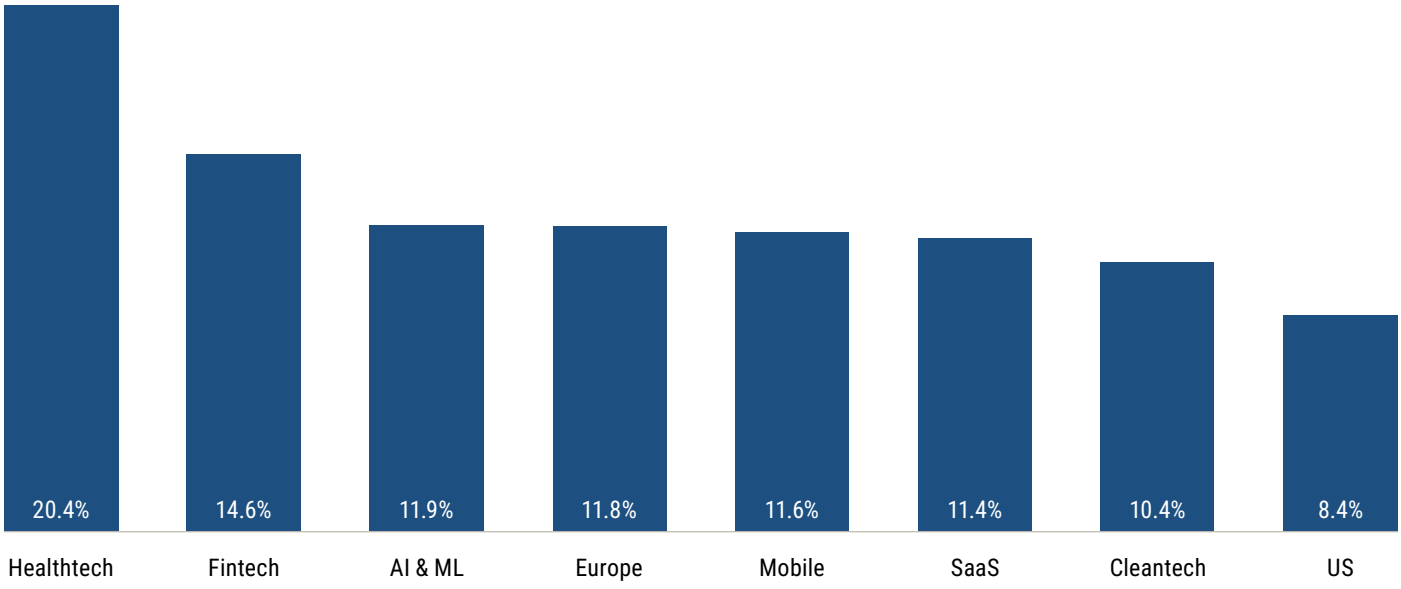

Valuations within Series C-D continue to see the largest increases in the ecosystem, although slightly lower than the Q1 figures at the start of the year. Median valuations in the grouped series sat at €897.9 million, more than four times the level at the end of 2025. As more data is added throughout the year, this trend could taper further, with lower valuations bringing the median down. Compared with 2025, median deal values in Europe also increased by 66.6% to €85.2 million.

Share of VC deal count by up, down, and flat rounds

Source: PitchBook • Geography: Europe • 30 June 2026

Share of VC down rounds by vertical and geography in H1 2026

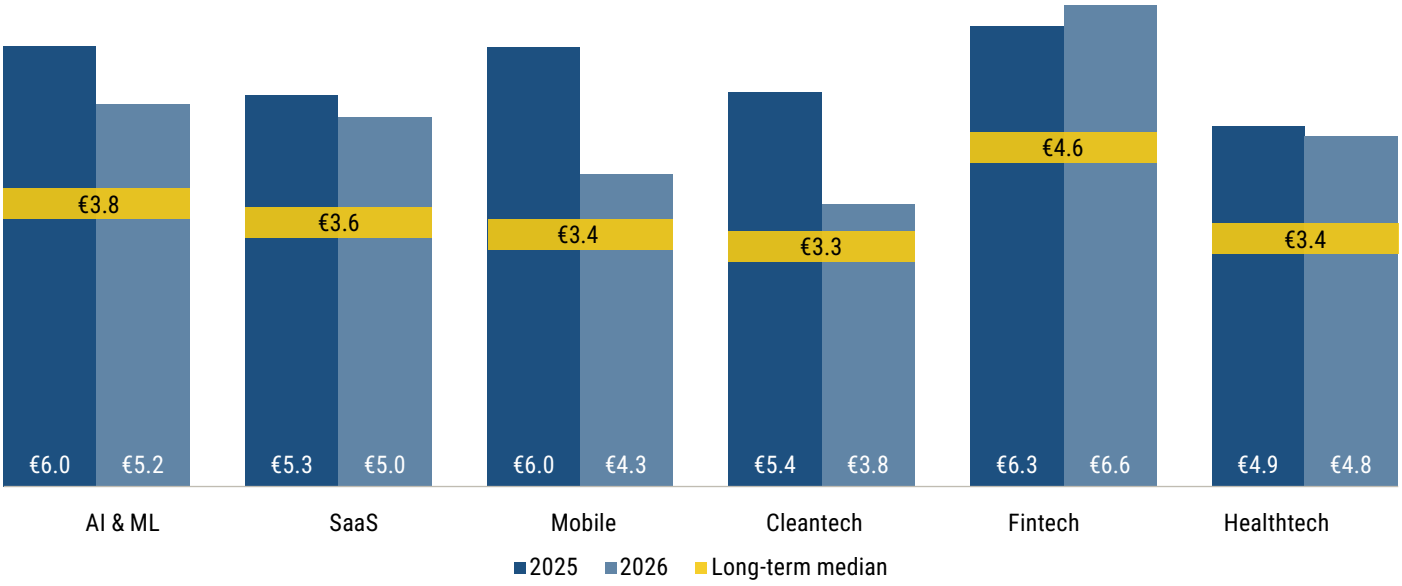

Source: PitchBook • Geography: Europe (US for final bar) • 30 June 2026

Prevalence of down rounds at an all-time low

In H1 2026, the proportion of down rounds in Europe was 11.8% of total rounds, down from 13.4% in 2025. This continues to exceed the US, where the same sits at 8.4%, down from 14% in 2025. In key regions in Europe, the data is skewed towards the UK and the Nordics, where step-downs in valuations accounted for 12.6% and 7.5%, respectively. In Europe, names that saw valuation step-downs included AI augmented-reality startup ModularCX, consumer goods firm Sunrise Alliance Beverages Group, and advanced manufacturing firm Iceotope. By vertical, trends within the AI space, unsurprisingly, remain resilient, with the proportion of down rounds decreasing to 11.9% in H1, above SaaS but well below healthtech and fintech startups, which both saw the highest prevalence of valuation declines between rounds at 20.4% and 14.6%, respectively.

Verticals

Median pre-seed/seed pre-money valuation (€M) by vertical

Source: PitchBook • Geography: Europe • 30 June 2026

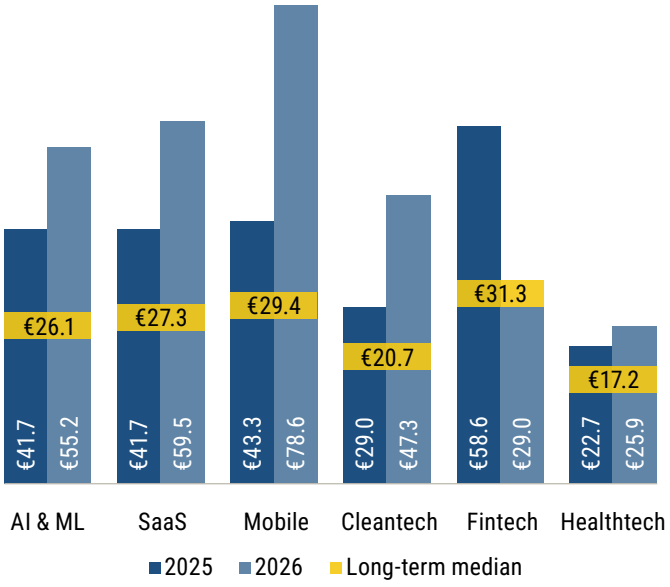

Fintech valuations lead in pre-seed/seed

At the pre-seed/seed stage, median fintech valuations grew the most in the first half of 2026. The median valuation was €6.6 million, as the vertical, despite weaker investment so far this year, remained well above AI and broader SaaS. Most of the AI and SaaS inflation in deal sizes sits in the later stages. Deal sizes in cleantech surprisingly showed resilience, on par with fintech, as deal activity in the broader space has been strong in 2026—as noted in our Q2 2026 European Venture Report.

Mobile valuations overtake inflated AI and SaaS medians in Series A-B

Inflation seen in Q1 in AI and broader SaaS valuations took something of a step back in Q2, as mobile emerged as the greatest gainer and the vertical with the highest median valuation. This stood at €78.6 million in H1 2026, 81.5% higher than in 2025. The vertical sits significantly higher than other previous leaders in 2026, such as AI and fintech, with both sitting at €55.2 million and €29 million, respectively. Regarding deal sizes, trends were mixed: Mobile deal sizes declined relative to 2025 and sat at a lower level, whereas AI and SaaS saw the greatest increases and now sit at the highest levels in absolute terms.

Regions

Median pre-seed/seed deal value (€M) by region

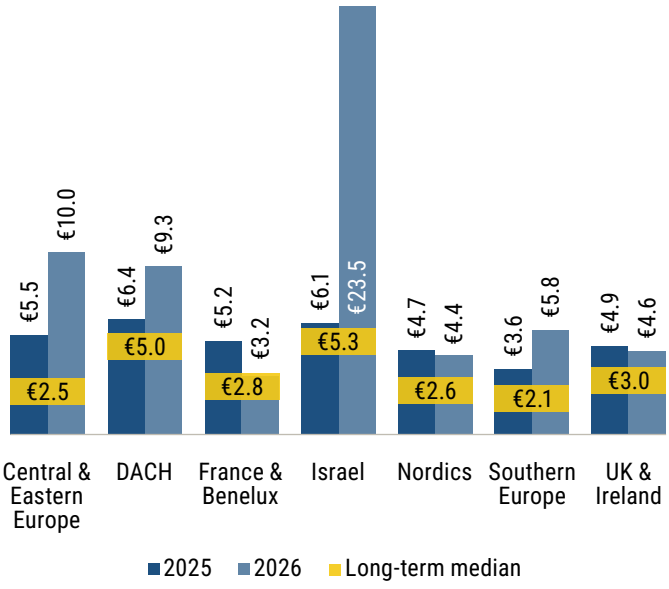

Source: PitchBook • Geography: Europe • 30 June 2026

Core regions see valuation declines in pre-seed/seed stage

Through H1, pre-seed/seed deal sizes across Europe have continued to increase, with DACH seeing the largest gains. DACH median deal size now stands at €3 million, a 58.4% increase compared with 2025 levels. Step-ups in other core regions, such as the UK & Ireland and France & Benelux, were more modest, with median deal sizes increasing by 26.2% and 3.1%, respectively. Trends are similar for company valuations as well. Whilst step-ups appear to be highest in peripheral regions, these are based on limited data. Where coverage is more robust (more than 20 counts), core regions have experienced declines in valuations; the largest fall has been in France & Benelux, where median pre-money valuations sit at €3.2 million, a 37.6% decline below 2025 levels. Valuations in the UK & Ireland also declined to €4.6 million, sitting below the European benchmark of €4.8 million.

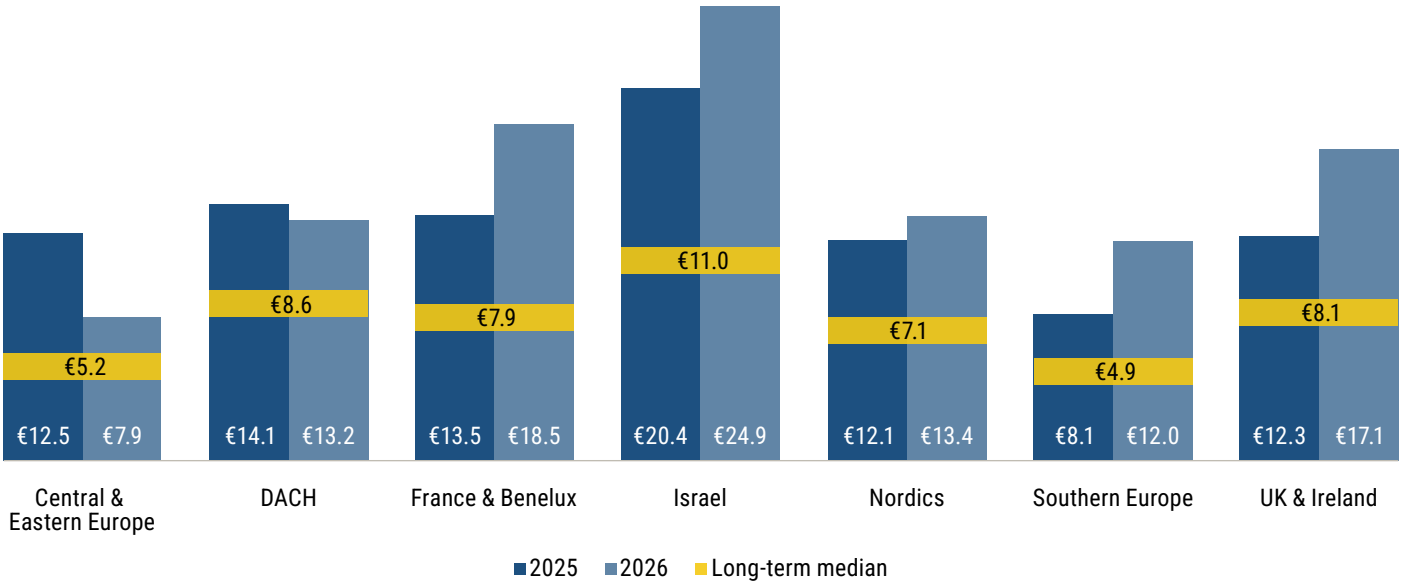

Median pre-seed/seed pre-money valuation (€M) by region

Source: PitchBook • Geography: Europe • 30 June 2026

Note: Data counts are <20 for Central & Eastern Europe, DACH, Israel, and Southern Europe.

Median Series A-B deal value (€M) by region

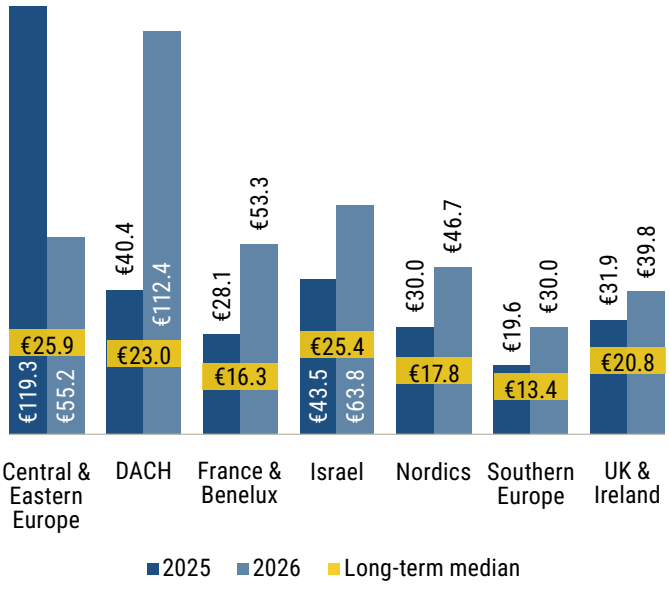

Source: PitchBook • Geography: Europe • 30 June 2026

Israel Series A-B valuations are the highest, but Southern Europe gains the most

In the Series A-B category, median deal sizes grew the most in Southern Europe, reaching €12 million in H1 2026, up 48.1% from 2025. The UK followed, with a 39% median increase, at €17.1 million in H1. Other core regions, such as France & Benelux, saw similar gains; however, DACH was one of the few areas to decline in median deal size, to €13.2 million, down 6% compared with 2025. Regarding company valuations, the data is sparser, making conclusions about specific regions more difficult. Coverage in France & Benelux and the UK was more robust, where step-ups in the former were the highest. The median valuation in France stood at €53.3 million, up 90% versus 2025, with companies such as BrightHeart (healthcare systems), Sumura (e-bike infrastructure), and Sunlib (solar energy) seeing the largest step-ups. In the UK & Ireland, the median valuation was €39.8 million, 24.7% higher than at the end of 2025. The largest step-ups so far this year have been from Fractile and Olix Computing (both AI chip startups), and Martin Precision (aerospace manufacturing). Outside of mainland Europe, Israel deal sizes and valuations remain the highest in absolute terms.

Unicorns

Unicorn count and aggregate post-money valuation

Source: PitchBook • Geography: Europe • 30 June 2026

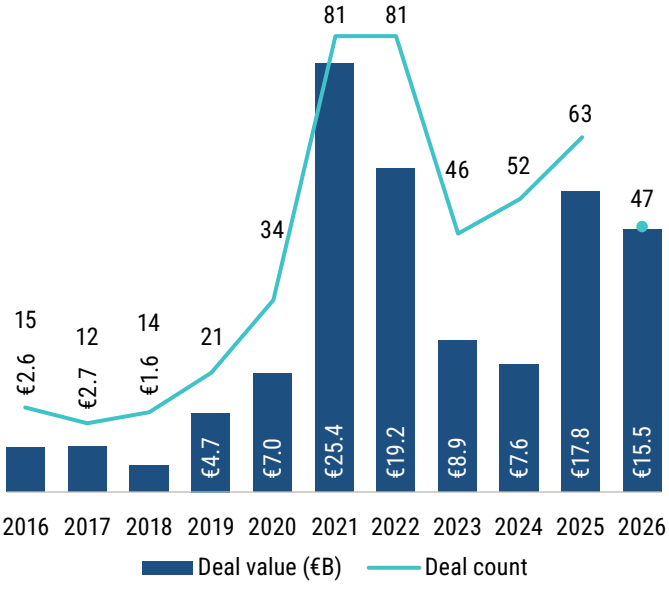

Unicorn deal value near 2025 levels

Unicorn deal value continues to leap higher throughout the year. Robust activity at the start of the year continued through to Q2, with €15.5 billion of deal value already nearing the €17.8 billion raised in full-year 2025. Encouragingly, it is not just a trend of value-driven activity, where a few megadeals are supporting totals. Deal counts in the space have also been robust, with 47 transactions, a run rate that sits well above last year. However, concentration risk is still at play through other channels, as the skew towards AI deals continued to grow in Q2, boosting totals.

More specialised AI applications are scaling in the herd

In Q2, eight of the top 10 unicorn deals sat in the AI space, with the top three largest transactions coming from well-reported rounds from Wayve, ICEYE, and Ineffable Intelligence. More specialised applications for AI are also scaling and maturing through the ecosystem, such as legal tech startup Legora, which now sits at a post-money valuation of €4.8 billion following their €513.5 million round. As noted in our European AI report, legal tech is one of the areas of the nuanced AI ecosystem that remain underinvested in Europe, ranking 18th among the top 20 verticals. In regions such as the US, AI penetration in the vertical does not even appear in the top 20, where we believe firms like Legora are spearheading the adoption

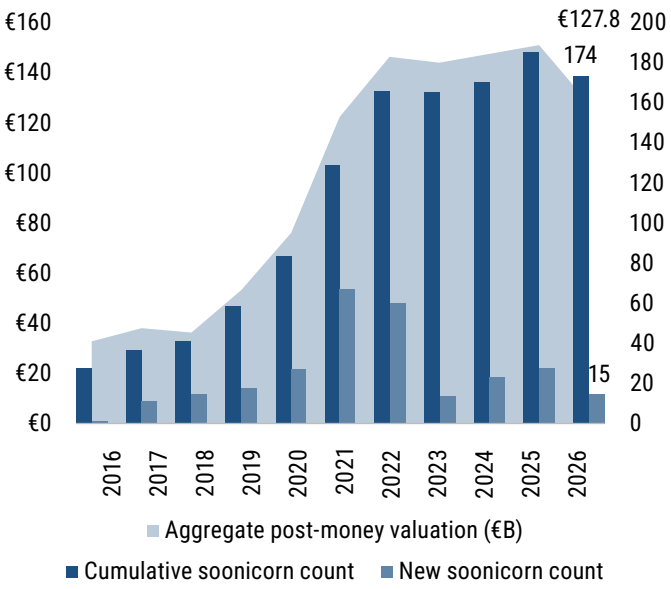

Unicorn VC deal activity

Source: PitchBook • Geography: Europe • 30 June 2026

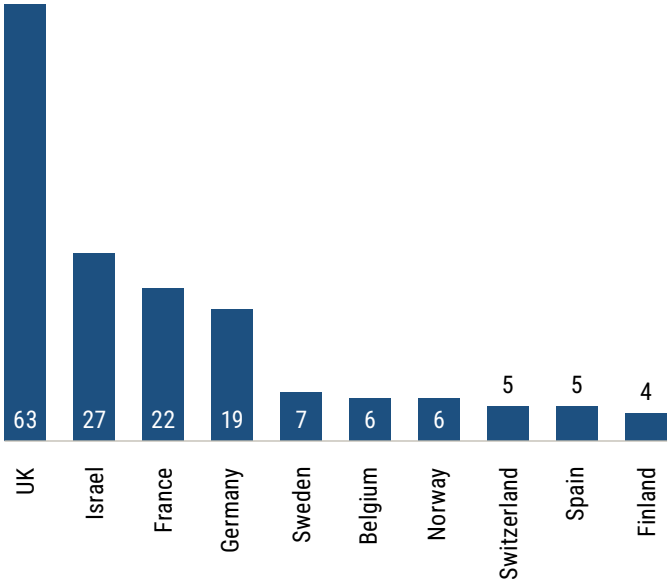

and disruption of software in less disrupted industries such as law. Furthermore, Legora has been operating a buy-and-build strategy, with its fifth acquisition of Wexler in 2026 evidencing a rapidly maturing and growing area of the unicorn market, where later-stage AI companies are competitively positioning themselves through both organic growth and funding, as well as inorganic growth (acquisitions).

Soonicorn count and aggregate post-money valuation

Source: PitchBook • Geography: Europe • 30 June 2026

Active soonicorn count by top 10 countries in H1 2026

Source: PitchBook • Geography: Europe • 30 June 2026

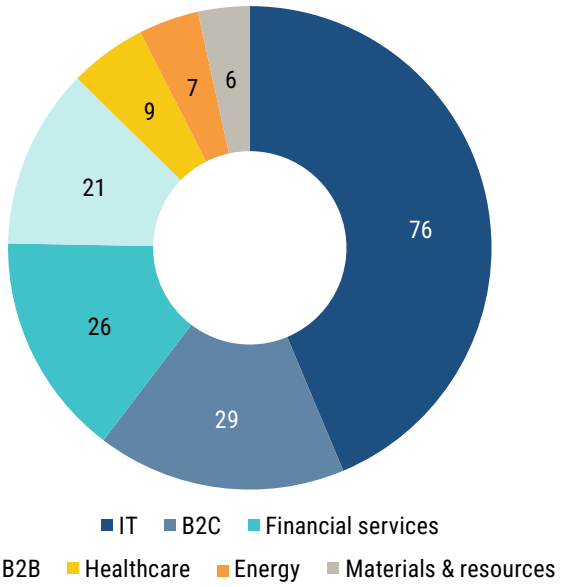

Unicorn market crosses €600 billion

Last quarter, we noted significant growth in the European unicorn market driven by AI late-stage valuation inflation, with nearly €600 billion in market capitalisation across 175 names. This has now been realised, with the total aggregate market value sitting at €609.1 billion, with 18 new unicorns minted this year. Eight names were added in Q2 alone, with half being AI-related companies. Names outside of this included Kpler Holding, Isar Aerospace, Nearfield Instruments, and FINN. With unicorn exit activity still tepid, the accumulation of value and counts in the herd is likely to continue through the year, especially if the run rate of activity is maintained for the rest of 2026.

Could more than 170 "soonicorns" grow the unicorn herd?

Since we started tracking "soonicorns" (VC-backed companies with a valuation between €500 million and €1 billion) in Europe, it appears, given the above market dynamics, that part of the soonicorn herd is being realised into the unicorn market. As of H1 2026, the aggregate value of €127.8 billion across 174 names continues to demonstrate a meaningful pipeline of potential unicorns that could grow Europe's late-stage market. Of these, 16 companies have valuations of €900 million or more, bringing them close to full herd induction. Surprisingly, a significant portion of the pipeline has been in the B2C space. Behind IT, where over 40% of the potential pipeline lies, 17% sat within B2C companies, followed by 15% in financial services. By region, the UK leads in potential candidates with 63 names, followed by 27 in Israel, and 22 in France. Outside the core regions, Belgium, Norway, and Sweden also have counts above mid-single digits.

Active soonicorn count by industry in H1 2026

Source: PitchBook • Geography: Europe • 30 June 2026

Whilst valuation trends for Series E+ are difficult to determine from Q2 data due to coverage limitations, the herd of soonicorns spans various stages of the VC funnel, not just venture growth. We, therefore, believe that growth in unicorn deal value and the market size seen in Q1 could be sustained if part of this soonicorn pipeline materialises into full unicorns.

PitchBook

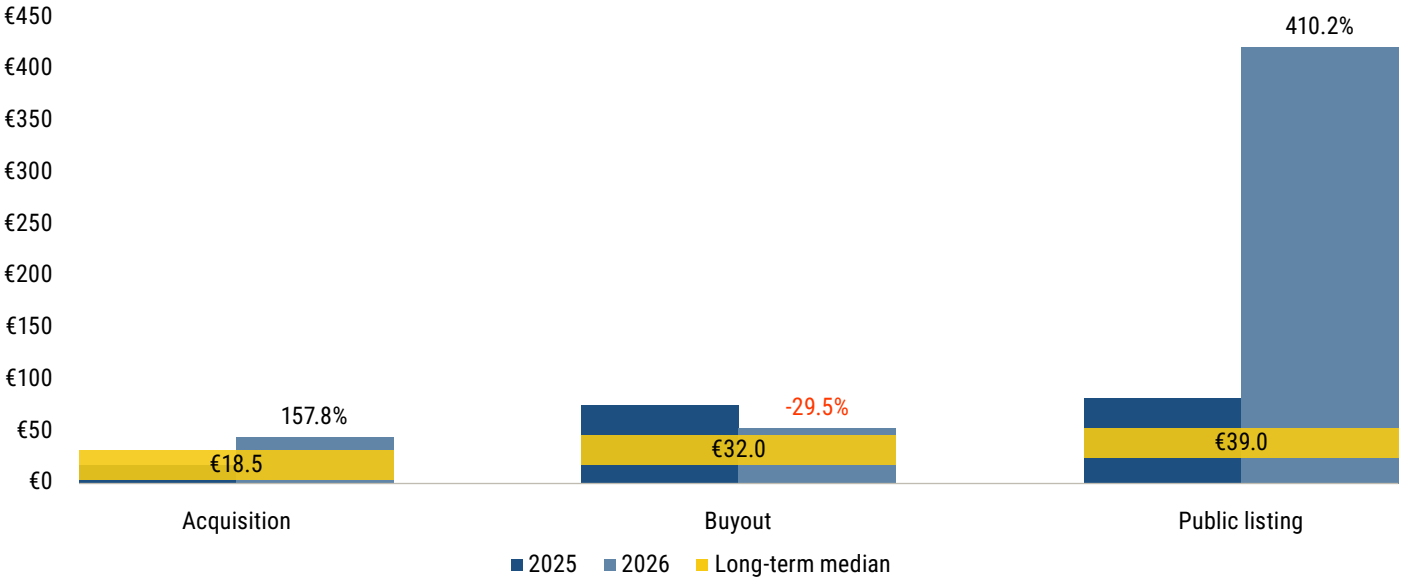

Top 20 active soonicorns in Q2 2026

Company	Soonicorn date	Deal value (€M)	Most recent post-money valuation (€M)	VC (€M) raised to date	Vertical(s)	Location

Liquidity

Median VC exit value (€M) by type (with 2025-H1 2026 change)

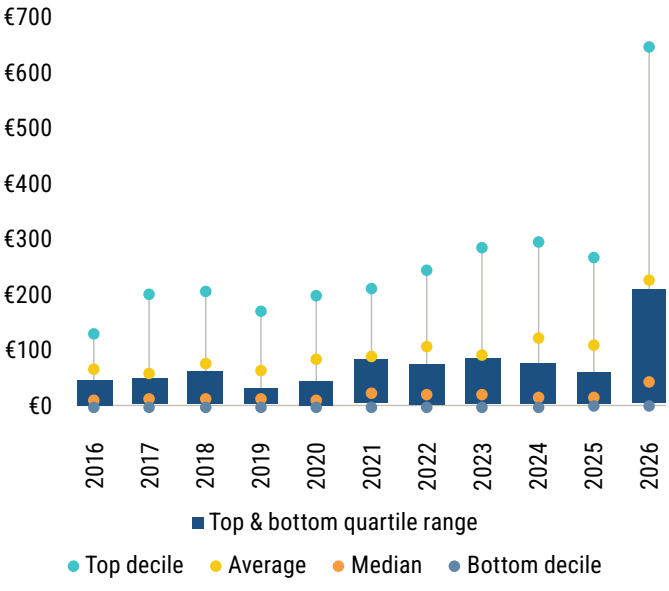

Source: PitchBook • Geography: Europe • 30 June 2026

Exit valuations stable at all-time highs in Q2

The median exit valuation in Europe remained broadly unchanged QoQ, at an all-time high of €58.4 million, up from €23.3 million in 2025. For context, the previous peak of €33.6 million was reached in 2021. By type, public listings saw the largest increase from 2025 levels, but favourable valuations have not led to an increase in VC-backed listings. As noted in Europe's IPO Window Stays Wide as Backlog Narrows, the IPO window which Europe has seen over the past year has predominantly been fuelled by the nonbacked space. Whilst we are optimistic about the broader IPO outlook, given favourable valuation levels and volatility, we remain cautious on the VC-backed space. Other exit strategy valuations, such as buyouts, continued to decline, with a 29.5% decrease in median value to €53.8 million in H1 from 2025 levels. Lastly, the median exit size for acquisitions increased to €45.9 million, up from €17.8 million in 2025.

VC acquisition value (€M) dispersion
